

For using MapVeiw Server control it should be added to the project. For the ease of use we will explain the how to add the MapVeiw to your project.

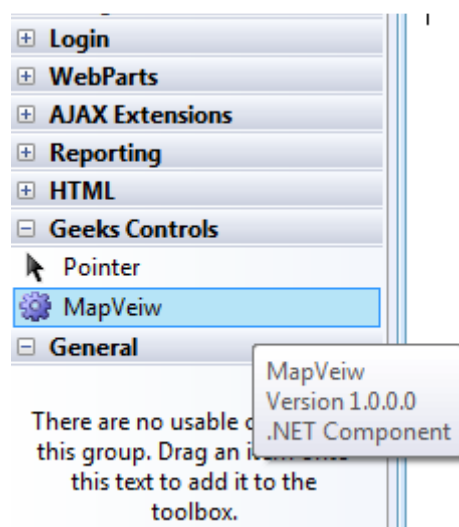

- 1- Here we create a new Web Application Project and will name it Web MapVeiw Test.
- 2- Open the toolbox and right click on it and choose Add Tab.

- 3- Choose a name for it. Here we put GeeksControls.
- 4- Right Click on the GeeksControls tab and select, Choose Items...

- 5- A window with the name “choose toolbox item” opens up. Click the browse and select MapVeiw.dll from the specific folder and click ok.
- 6- Now you should have a MapVeiw tool in the GeeksControls tab.

- 7- Now select the MapVeiw tool in the toolbox under the GeeksControl tab and by drag it on to the webpage and drop it there. Then you will have your control on to your page.
